Chain Genius – Inventory Intelligence Engine v0.6

Runs in your browser. Your file never leaves your device. All figures are calculated, not AI-generated.

Supply source: **PO-verified supply** · Risk policy: **workbook** · Demand basis: **12-month average**. Shortage, MRP and feasibility figures depend on these settings (Settings tab).

Management summary – Chain_Genius_Project_001_Northstar_Dataset_1.xlsx

SIMULATED DEMONSTRATION ANALYSIS: this workbook describes itself as synthetic or test data (sheet “START HERE”). Do not present these results as real client work. Items marked (est.) are calculated estimates, not measured results.

£2,533,596	16	26	£106,934
Inventory value (workbook data)	Critical items (calc.)	Materials to order now (est.; PO-verified supply)	Potential excess (est., not a saving)

Recommendations

Priority	Recommendation	Reason and financial effect	Suggested action	Confidence
1	Secure supply for the 16 critical items (FG003, FG027, RM001, RM002, RM003, RM010)	No available stock, or position cover below lead time. Finished goods affected carry about £50,700 of monthly sales value (exposure, not a loss).	Expedite or place orders for the listed items; confirm supplier dates.	Low
2	Verify on-order quantities before ordering	Inventory on-order exceeds snapshot-dated POs by 32,334 units (raw materials); results change with the supply source setting.	Obtain open PO ledger; reconcile with the inventory system.	High
3	Review excess stock (6 items)	Stock above 90 days of cover: potential opportunity £106,934 (upper bound, not a saving; threshold is an assumption).	Reduce future purchasing or production for these items; review forecasts.	Medium
4	Manage weak suppliers (SUP002, SUP010, SUP009, SUP006, SUP011, SUP003)	Supplier score under 60 among assessed suppliers (at least 16 PO(s) each).	Agree delivery performance targets and lead-time buffers.	Medium
5	Review reorder points (22 items look too low)	Workbook reorder points do not reflect lead time and supplier lateness for those items (calculated policy is indicative).	Recalculate reorder points per item and agree the policy.	Medium

Limitations

Supply source: PO-verified. Material usage is estimated from the BOM and sales, not recorded. MRP holds demand flat at its average (the forecasts are not yet fed into MRP). History is 12 months. Production feasibility uses illustrative orders (no open orders in data) and ignores capacity. 1 high-severity data issues remain; see Client questions (10). Confidence by area: see the Data confidence tab. Feasibility result: 33 of 50 orders short of materials.
